CIRCULATION & CLEANING SYSTEM

The Most Advanced Circulation & Cleaning System Ever Produced!

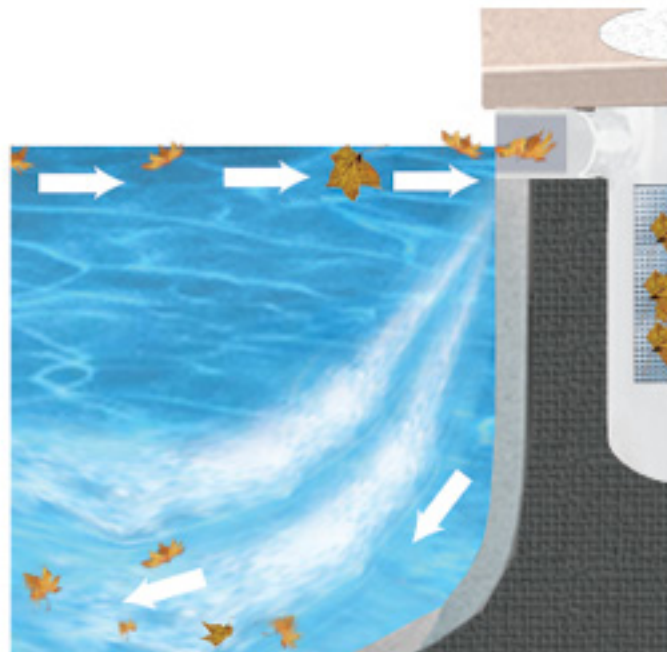

Maximize Your Energy Savings

The V360 Advanced Circulation and Cleaning System, addresses your whole pool from top to bottom. Custom designed by the experts at Blue Square Manufacturing, your swimming pool is assured to have every surface of your pool addressed with filtered and sanitized water throughout the filter run cycle. No booster pumps to waste your energy dollar. No hoses or robotic devices to take away from the beauty of your back yard dream.

Downdraft™ Debris Management System* Largest Debris Capacity Canister

For Maximum Performance

The DownDraft Current uses water in two unique ways. DownDraft both influences submerged debris towards the Debris Removal Drain and it draws floating debris into the mouth of the skimmer. This gives you twice the cleaning power for the same energy dollar making venturi or suction only skimmers obsolete.

Combine for Maximum Performance

The Abyss canister, simplifies maintenance. Conveniently located by your equipment, the Abyss can be plumbed with multiple canisters to allow for heavier debris environments. Robot cleaners have tiny bags and require you to retrieve the robot from the bottom of the pool many times compared to simply removing the Abyss lid and emptying the basket once.

Variable Speed Water Valve

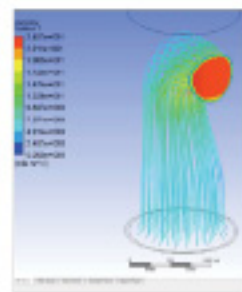

Maximum Performance at every RPM

The V360 Water Valve is the heart of the cleaning system. This ultra-efficient valve delivers maximum flow with minimal noise and water pressure variations making it the performance leader in the industry. The innovative pressure-safe valve design protects your system by ensuring that one port is always open. Large 2" inlet and (6) 2" ports maximizes flow. The see-through lid design allows for inspection of turbine and gear without the need for disassembly.

The Performance Jet

Powerful | Effective | Virtually-invisible

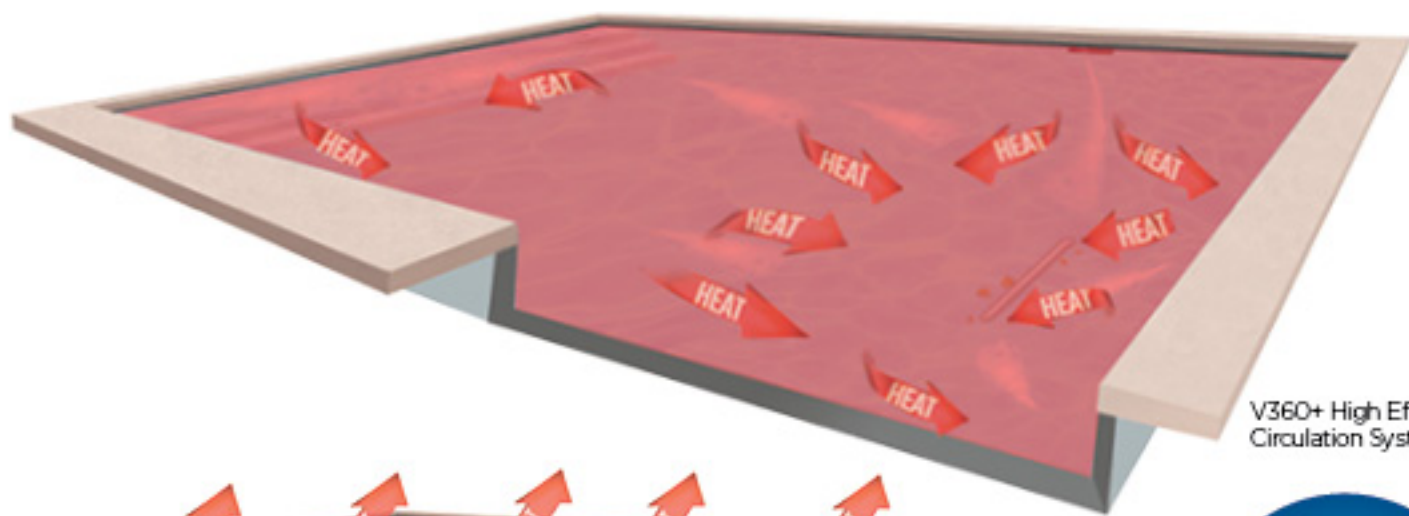

The Performance Jet, has been engineered using Computational Fluid Dynamics to be the most advanced Cleaning Jet ever created. Using innovations taken from the Aerospace Industry, we captured more of the water energy and focus that energy on the floor of the pool. This gives you more cleaning radius for less energy dollars.

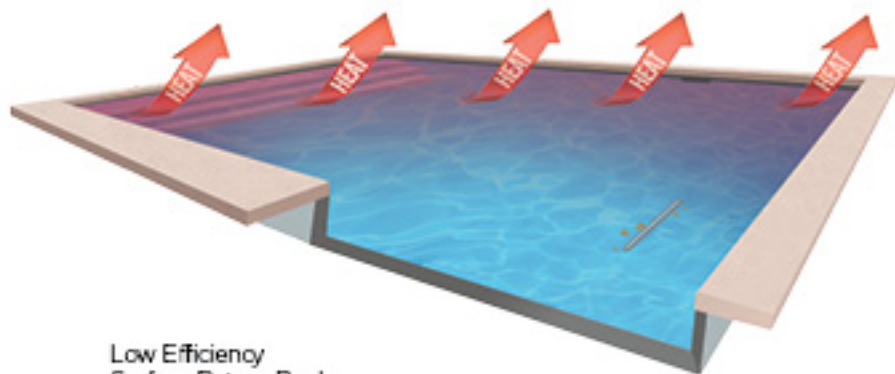

Proven to save you chemicals and energy for the life of your pool

Energy dollar for energy dollar more cleaning power. V360+ save up to 15%-20% in chemical costs and 20% -30% in heating costs.

V360+ High Efficiency Circulation System

Low Efficiency Surface Return Pool

V360+ is the only system that consistently delivers savings throughout your entire pool at every pump speed.
