

## Blue Square Bulb Syncing Instructions

1. Turn all the bulbs on and leave on for at least five minutes. This will lock the bulb into whatever color it is currently showing.
2. Once all the bulbs are locked in, then turn on and off three consecutive times, and all the bulbs should give a quick flash and go to red.
3. Now the bulbs are all in sync and should change colors together until customer “locks them in again” by keeping them on a color for at least five minutes.
